

Quarterly Platform Health Report - Q1 2026

1. Operational Review Section

Multiple dashboards reported delayed metric synchronization caused by warehouse replication backlog and retry queue accumulation.

Several enterprise tenants experienced intermittent API Gateway latency spikes following the SSO migration initiative executed during January 2026.

This report summarizes operational health, service availability, and incident patterns observed across the NexaCorp enterprise platform during the reporting period.

Support escalation trends indicate growing authentication instability associated with stale JWT signing certificates and VPN timeout events.

Tenant	Support Tickets	Escalations	Resolution SLA	Risk
TENANT_ALPHA	184	22	91%	Medium
TENANT_BETA	233	35	88%	High
TENANT_GAMMA	145	12	95%	Low
TENANT_DELTA	201	29	90%	Medium

Observed temporary degradation during blue-green deployment transitions.

Several stale dashboards were linked to delayed ETL synchronization jobs.

2. Operational Review Section

Multiple dashboards reported delayed metric synchronization caused by warehouse replication backlog and retry queue accumulation.

This report summarizes operational health, service availability, and incident patterns observed across the NexaCorp enterprise platform during the reporting period.

Support escalation trends indicate growing authentication instability associated with stale JWT signing certificates and VPN timeout events.

Operational analytics identified increased Kafka consumer lag during deployment rollouts and regional traffic redistribution events.

Region	CPU Usage	Memory Usage	Storage	Observations
us-east-1	78%	72%	81%	High deployment activity

eu-west-1	69%	64%	75%	Stable operations
ap-south-1	82%	80%	88%	Traffic growth observed

Several stale dashboards were linked to delayed ETL synchronization jobs.

Tenant-specific latency spikes correlated with gateway cache invalidation failures.

3. Operational Review Section

Operational analytics identified increased Kafka consumer lag during deployment rollouts and regional traffic redistribution events.

Several enterprise tenants experienced intermittent API Gateway latency spikes following the SSO migration initiative executed during January 2026.

Multiple dashboards reported delayed metric synchronization caused by warehouse replication backlog and retry queue accumulation.

This report summarizes operational health, service availability, and incident patterns observed across the NexaCorp enterprise platform during the reporting period.

Several enterprise tenants experienced intermittent API Gateway latency spikes following the SSO migration initiative executed during January 2026.

This report summarizes operational health, service availability, and incident patterns observed across the NexaCorp enterprise platform during the reporting period.

Region	CPU Usage	Memory Usage	Storage	Observations
us-east-1	78%	72%	81%	High deployment activity
eu-west-1	69%	64%	75%	Stable operations
ap-south-1	82%	80%	88%	Traffic growth observed

Tenant-specific latency spikes correlated with gateway cache invalidation failures.

Observed temporary degradation during blue-green deployment transitions.

4. Operational Review Section

Support escalation trends indicate growing authentication instability associated with stale JWT signing certificates and VPN timeout events.

Multiple dashboards reported delayed metric synchronization caused by warehouse replication backlog and retry queue accumulation.

Several enterprise tenants experienced intermittent API Gateway latency spikes following the SSO migration initiative executed during January 2026.

Operational analytics identified increased Kafka consumer lag during deployment rollouts and regional traffic redistribution events.

Service	Availability %	Avg Latency	Incidents	Notes
API Gateway	99.1	420ms	14	Gateway timeout spikes
Identity Service	98.8	390ms	19	AUTH-403 escalation
Analytics Pipeline	97.5	880ms	27	Kafka lag observed
Workflow Engine	99.4	240ms	6	Stable performance

Tenant-specific latency spikes correlated with gateway cache invalidation failures.

Support teams recommended increasing Kafka partition count for analytics-events topic.

5. Operational Review Section

Multiple dashboards reported delayed metric synchronization caused by warehouse replication backlog and retry queue accumulation.

This report summarizes operational health, service availability, and incident patterns observed across the NexaCorp enterprise platform during the reporting period.

Operational analytics identified increased Kafka consumer lag during deployment rollouts and regional traffic redistribution events.

Several enterprise tenants experienced intermittent API Gateway latency spikes following the SSO migration initiative executed during January 2026.

This report summarizes operational health, service availability, and incident patterns observed across the NexaCorp enterprise platform during the reporting period.

Several enterprise tenants experienced intermittent API Gateway latency spikes following the SSO migration initiative executed during January 2026.

Support escalation trends indicate growing authentication instability associated with stale JWT signing certificates and VPN timeout events.

Tenant	Support Tickets	Escalations	Resolution SLA	Risk
TENANT_ALPHA	184	22	91%	Medium
TENANT_BETA	233	35	88%	High
TENANT_GAMMA	145	12	95%	Low
TENANT_DELTA	201	29	90%	Medium

Support teams recommended increasing Kafka partition count for analytics-events topic.

Tenant-specific latency spikes correlated with gateway cache invalidation failures.

6. Operational Review Section

Multiple dashboards reported delayed metric synchronization caused by warehouse replication backlog and retry queue accumulation.

Operational analytics identified increased Kafka consumer lag during deployment rollouts and regional traffic redistribution events.

Operational analytics identified increased Kafka consumer lag during deployment rollouts and regional traffic redistribution events.

Operational analytics identified increased Kafka consumer lag during deployment rollouts and regional traffic redistribution events.

Several enterprise tenants experienced intermittent API Gateway latency spikes following the SSO migration initiative executed during January 2026.

Tenant	Support Tickets	Escalations	Resolution SLA	Risk
TENANT_ALPHA	184	22	91%	Medium
TENANT_BETA	233	35	88%	High
